

We're working on it!

The Greater Peterborough Area Climate Change Action Plan was developed to reduce local contributions to climate change while preparing the community for future changes. The Climate Change Action Plan set greenhouse gas emissions reduction targets and associated actions to accomplish this goal.

Some recent community actions include:

-  Township of Douro-Dummer replaced all of their street lights with LED lighting
-  Peterborough Utilities Inc. installed 1,544 solar panels with 431 kW capacity on the roof of the Kinsmen Civic Arena
-  Peterborough Utilities Inc. installed a 380 kW biogas digester at the City of Peterborough's Wastewater Treatment Plant to produce energy from the processed waste
-  Peterborough Distribution Inc. installed nine new Electric Vehicle charging stations at six locations – 6 in Peterborough, 1 in Lakefield and 2 in Norwood
-  City of Peterborough reconstructed Ashburnham Drive with a complete streets design, encouraging use of cycling and walking trails
